

For years SCA has been recognised as market leader in the field of piglet nutrition, constantly evolving to meet the ever changing needs of pig producers in the UK and around the world.

We offer cutting edge solutions to meet the nutritional requirements of your piglets and a range of complementary products to help enhance their health status too.

A global research and development programme supports on-going product improvements and new ideas.

As a result of our ability to adapt and innovate, we have earned an enviable reputation across the globe for performance, quality and service.

High quality ingredients, stringent quality controls and technical expertise combine to deliver optimum performance.

SCA will give your piglets the start of a lifetime and help them to grow quickly and efficiently into first class finished pigs.

The holistic approach for seamless performance from start to finish

A complete range of specialist diets to give your piglets the start of a lifetime.

Starting with appetisers and progressing through our specially formulated pre-starter, starter and link diets, the range provides piglets with the optimum nutritional input. Using these diets, we provide you with a correctly tailored package that will set your piglets on the road to fully exploiting their potential and achieving rapid, economic growth.

A completely unique medication-free package of natural feed components developed by SCA to aid piglet viability, TranZone can help piglets thrive and to grow quickly and

efficiently into top quality finished pigs.

Included as standard in piglet diets, SCATranZone gives pig producers a significant advantage in today's highly competitive market:

- Helps manage gut health
- Reduces the risk of scouring
- Encourages feed intake
- Achieves optimal performance

TranZone is also available in Rip 'n' Tip packs for home mixers and through premixes.

Farm Nutrition Home Mix Solutions

Having maximised the potential of your piglets, you need to give them the best finish they can get.

Using home-grown raw materials, our nutritionists will combine them with the right products to maximise nutritional potential, making sure that

home-mix rations are produced with the optimum specification and are tailored to the requirements of your pigs.

The Farm Nutrition range of products includes protein/energy blends, concentrates, premixes and fishmeal replacers.

A suite of specially formulated diets dedicated to optimising the productivity of sows is also available.

Our diets are complemented by a range of innovative health care products and management aids.

When your piglets are at their most vulnerable and facing the challenges of early life, you need to give them all the help they can get.

The Helping Hands range

A range of nutritional products specifically designed to help your piglets overcome certain difficulties at key periods in their development. Whether it is to supplement sow milk, help rear emergency weaned piglets, or quickly establishing an appetite for dry food, SCA has a product to help:

- SCA Primistart
- SCA Sow Milk Equivalent
- SCA Piglet Milk
- SCA Piglet Porridge

Part of this range is **SCA Kiss of Life**, a complement to maternal colostrum for weak or distressed piglets containing optimum levels of immunoglobulins and probiotics. It is designed to help give piglets immediate immune protection and vital energy after birth.

To support the Helping Hands range, **SCA Breedrite** is a supplemental feed for sows designed to encourage piglet performance through the optimization of maternal nutrition during lactation.

Management aids

A range of management aids designed to help your pigs perform to their full potential by encouraging improvements in overall health and hygiene.

SCA NaturClean is a natural, non-irritant bedding conditioner that combines a highly effective disinfectant with exceptional levels of absorbency. It removes moisture and provides a dry, clean environment for your pigs, reducing the risk of bacterial infection.

An organic acid blend, **SCA Aguacid**, is designed to maintain a stable low pH in the water supply. It can help the piglet overcome the post weaning check by promoting water intake and helping maintain gut pH to boost solid feed intake.
